

SECURE HEALTHCARE INFORMATION MANAGEMENT SOLUTION

Instant & Secure Access to All Information
Protects Privacy & Increases Patient Safety
Highly Scalable HIPPA Compliant Enterprise Solution

Secure Healthcare Solution

Whenever a patient is admitted to a hospital, a significant amount of information accumulates covering everything related to the patient's health including medical history, laboratory tests, X-Rays, Charts, insurance data and other supporting documents. Every subsequent patient encounter produces even more paper work and adds to the information burden that hospitals have to keep, store, and retrieve when needed.

Hospitals must also ensure that access to patient records is strictly enforced according to legal and privacy rules such as HIPPA. Failure to do so can result in serious penalties or law suites.

The amount of information gathered every year can be overwhelming as it can rise to millions of pages, images and other types of documents. In addition, much of this information has to be retained for long periods and be available whenever the patient is readmitted or for potential litigation.

Storage space can also become an expensive issue. Constantly adding filing cabinets and warehouse space is both costly and inefficient. The risk of document loss due to misfiling, fire, flood or other disaster makes it imperative to look for a better solution.

The Digital Hospital

Our Healthcare solution for Information Management will organize, index and store all patient and hospital data no matter what format is used.

The solution provides an extremely secure and highly scalable architecture which allows doctors and healthcare professionals to search for and instantly access the information they need from any location.

Every action is tracked in a detailed Audit Trail, and the solution maintains a Revision History for every document. This assures the integrity of every document.

Summary Features:

- ✓ Manage ALL information in a single scalable repository. This includes all patient data, charts, X-Ray & MRI images, Word, Excel, PDF, Audio, Video, etc.
- ✓ Very high security controls.
- ✓ Encryption options to increase data security.
- ✓ Instant access from anywhere.
- ✓ OCR and Barcode recognition.
- ✓ Scalable to multiple locations.
- ✓ Failover capability assures access to the information even when the primary repository fails
- ✓ Easily integrates with other solutions used at Hospitals such as Patient Admission, Accounting and other solutions.
- ✓ Live backup to offsite locations
- ✓ Works with the Laserband™ wristbands to provide quick access to relevant data.
