

# SAPERION

## Enterprise Content Management

### *Summary Features*

- **SINGLE VENDOR / UNIFIED Multi-Tier Architecture** for all core technologies (no 3<sup>rd</sup> party products).
- **Out-of-the-box scalable** solutions for Document Imaging, Document & Records Management, Storage Management, Workflow & Business Process Management, Data Mirroring, Failover and Disaster Recovery.
- **Highly Secure Architecture** spanning the entire document capture/indexing/storage/retrieval cycle. This includes the storage repositories, media, documents, pages and content. Many encryption algorithms are available to further protect documents and metadata.
- **Workflow:** Includes a graphical process designer which makes it easy to design sophisticated business processes that can operate in parallel and spawn other processes or integrate with external applications. Alarms and event triggers are supported as well as email notifications.
- **Distributed Storage Management** that supports RAID, SAN, optical jukeboxes and enterprise storage devices such as the IBM DR550 and EMC Centera. Features also include Placement Strategies, very large configurable Caches, Multithreading and Real-Time Mirroring for replication and fail-safe operation. Automated HSM management of Online / Near-Line storage.
- **Automatic Failover:** Provides **Business Continuity** features that guarantee access to documents even when the primary storage servers fail. This is provided by Saperion's own architecture and does not require any 3<sup>rd</sup> party clustering software.
- **Universal Web Client:** Enables **ALL** client features through a Browser. This includes scanning, indexing, editing, workflow and administration functions. HTML clients are also available.
- **Rendering** option on the server to automatically create PDF files and multi-page TIF files.
- **Classification** and Full Text search engine interfaces for dtSearch, Autonomy & Verity.
- **Directory Services** support: Novell NDS, Microsoft Active Directories, Kerberos and LDAP.
- **Complete Disaster Recovery** that restores ALL database information including all revisions.
- **Low Administration Overhead:** Microsoft Management Console Administration of the Document and Broker servers can now be done via the MMC from any authorized station.
- **SQL Databases:** DB/2, Microsoft SQL-Server, Oracle, Informix and other SQL databases. All database configuration is done through Saperion.

- **Integrated** with Microsoft Exchange, Microsoft Office including Outlook, Sharepoint Portal Server, Windows Explorer through WebDAV, Lotus Notes, GroupWise, Baan, Navision and SAP. An Extensive COM and Java API allows easy integration with other line of business applications.
- **Multilingual support:** English, French, Italian, German and many other languages are available. Users can change languages on the fly without restarting the client. User interfaces automatically translate to the selected language.
- **Extensive Audit-Trail** tracking with a comprehensive built-in **report generator**.
- **Outliner** provides a graphical hierarchical search feature.
- **Integrated image viewer with secure annotation** features. These include highlighting, Sticky notes, Arrows, Black markers and Stamps.
- **Object Independence:** Support for all file formats including scanned images, application files, audio, video, engineering drawing (CAD), and any other.
- **Multi-Platform** support: Windows, Linux and Sun Solaris.
